

XM Satellite is great! My kids have a portable DVD Player in my car. I have owned 2 vehicles since the purchase of our Portable DVD Player, the first one did not have XM Satellite Radio and now my new Vehicle does. For some reason when my kids are watching their TV in the backseat it distorts every one of the FM Stations. This did it in my 04 Malibu and also does it in my 04 Impala. With Satellite Radio I can still listen to the radio (XM of Course) while my children are watching TVI love the Satellite Radio. I have been waiting on the Atlanta station #227 on XM to be finished so I can get weather and traffic updates for my area. Why shouldn't we be able to have instant weather and traffic updates 24 hours. With AM and FM radio you have to wait for it to be announced and then you only get traffic updates during rush hours. Accidents don't only happen during rush hour. Please do not fight the people at XM Radio about giving the people what they deserve, they are only trying to provide a public and customer service. We are after all living in America, right? Please Reject the NAB's petition. We, the people are the ones who pay for this service, we shouldn't have to fight for our right to listen to our choice of radio and no government affiliation should be taking away our rights and freedom to listen to whatever we may choose.
